

## Microchem

Chemical and pharmaceutical industry

### High scores for low amounts

KSB's Microchem is a small revolution. It is the world's first centrifugal pump to transport minimal volumes – from just a few millilitres per minute to 300 litres an hour – absolutely pulsation-free at up to 2.5 bar differential pressure. Combined with the Microchem Control Unit, the pump concept offers significant advantages over conventional positive displacement pumps.

### Microchem: Small pumps for big reasons
